

Project Design Phase-II Customer Journey Map

Date	10 July 2026
Team ID	SWTID-2026-6119
Project Name	Credit Card Approval Prediction System
Maximum Marks	4 Marks

Scenario: An individual discovers, applies for, and receives a decision on a credit card application through the Credit Card Approval Prediction System.

	Entice	Enter	Engage	Exit	Extend
Steps	Finds out a credit card can be applied for online through the bank's portal	Opens the application form and starts filling in personal and financial information	Sends in the finished form and waits for the outcome	Sees the Approved / Rejected outcome on the results screen	Gets follow-up contact (next steps if approved, guidance if not)
Interactions	Bank website or in-branch notice about applying online	Web application form built with HTML/Bootstrap	Flask backend that runs the form data through the ML model	Results screen displaying the prediction outcome	Follow-up email or in-branch message from the bank
Goals & Motivations	Wants a quick way to apply for a card	Wants to fill out the form correctly without getting stuck	Wants a decision quickly rather than waiting several days	Wants a clear answer on whether they were approved or rejected	Wants to know what happens next either way
Positive Moments	Pleased that applying online seems fast and straightforward	Finds the form short, clear, and easy to fill out	Feels reassured that the decision won't take days to arrive	Feels relieved and satisfied seeing an instant, clear outcome	Feels the whole process was modern and respected their time
Negative Moments	Not fully sure the online application is trustworthy or accurate	Gets confused when a field isn't clear (e.g., what counts as income)	Feels a bit anxious during the short processing wait	Feels frustrated by a rejection with no explanation given	Gets no guidance afterward on how to improve their eligibility
Areas of Opportunity	Add brief reassurance about data privacy on the landing page	Add helper tooltips on form fields to cut down on confusion	Add a simple loading indicator so the wait feels purposeful, not frozen	Show a brief explanation of the key factors behind the decision	Send a follow-up email or message with next steps or tips to improve eligibility
