

Project Demonstration

Project Demo Planning

Date: 10 July 2026

Team ID: SWTID-2026-6119

Project Name: Credit Card Approval Prediction System

Maximum Marks: 2 Marks

Demo Agenda & Time Allocation (Target: 10 minutes)

#	Segment	Time	Presenter
1	Problem Statement & Motivation	1 min	K Akshaya
2	Dataset, Univariate & Multivariate EDA	2 min	Naveen Kumar Kayala
3	Data Cleaning, Feature Engineering & Logistic Regression Model	2 min	Manogna Reddy
4	Random Forest, Decision Tree & Final Model Comparison	1.5 min	K Akshaya
5	Live Application Demo (HTML pages, Flask app - Approved + Rejected cases)	2.5 min	K Akshaya
6	Architecture, GitHub Repository Walkthrough & Conclusion	0.5 min	K Akshaya
7	Q&A / Closing	0.5 min	Whole Team

Pre-Demo Checklist

- Flask application tested and running locally (python app.py) before the session starts.
- Two applicant profiles prepared in advance - one that predicts Approved, one that predicts Rejected - to show both outcomes live.
- Jupyter notebook already executed, with the model comparison table and EDA charts visible without needing to re-run cells live.
- GitHub repository open in a browser tab, scrolled to the root so all 8 phase folders are visible.
- Backup: screenshots of the working app and result pages available in case of a live connectivity issue during the demo.

Demo Environment

The demo will run on a local machine (localhost:5000) for reliability. If cloud deployment (IBM Cloud or similar) is completed before the final submission, the demo will additionally show the publicly hosted version as a bonus.
